

Bracket Installation Instructions

STEP 1

Insert stove bolt from behind through elongated slot and hold in place.

STEP 3

Place bracket plate at desired height on light pole and duct tape to pole to hold in place.

STEP 5

Install 2nd banding strap on bottom of back plate and tighten down.

STEP 6

Slide banner on to bracket arm at top and loop wire or electric ties through grommets and around lightpole to insure banner will not slide off of arm.

STEP 2

Place punched plastic spacer over stove bolt on face and slide all the way down. Place 2nd stove bolt from behind through elongated hole and through plastic spacer as shown.

STEP 4

Wrap the first steel band around back plate at top and tighten down. Remove duct tape and place rod plate over stove bolts.

Special note: Bracket has a cantilever system built into rod plates be sure the arrow on the plate is always pointing at the banner.

For larger banners over 30" x 60" we advise that you use 2 stainless steel bands at the top of the back plate and 2 stainless steel bands at the very bottom.

STEP 7

Pull banner down to find approximately where the back plate for the bottom bracket should be placed. Try and center back plate so pocket will fall in about the middle for maximum adjustability up and down.

STEP 8

Repeat steps 1 through 6
